

Envipro Group Environmental Policy

The Envipro Group will contribute to society by fulfilling its mission as an environmental business. To realize the part of the “Corporate Philosophy”, "Use every material repeatedly, preserving their value for as long as possible," we will carry out our business activities with the strong "Mottainai" spirit that Japanese people have.

In conducting our business activities, we have established the following environmental policy and will act accordingly, placing importance on harmony with the natural environment and coexistence with the local community, with the mission of “Contribute to create a sustainable society”, and under the concept of “Lead a circular economy”.

1. Reduction of environmental impact

Our group will promote environmentally friendly business activities. To minimize the environmental impact, we will reduce final disposal, and work on energy and resource conservation. In particular, we will reduce our environmental impact by conducting environmentally friendly business activities in our waste collection, transportation, treatment, and recycling operations.

2. Operation of the management system

The Envipro Group will introduce and operate a management system based on ISO and other standards in its plant operations. We will continuously improve our environmental efforts by complying with environmental laws and regulations, procuring, developing, and providing environmentally friendly products and services, assessing and monitoring our environmental impact, raising environmental awareness among employees, and disclosing environment-related information.

3. Compliance with environmental laws and regulations

Our group will comply with environmental laws and regulations and conduct business activities in an environmentally friendly manner. In addition to thorough compliance with laws and regulations, we will actively collect and deploy information on the environment and laws and regulations on a regular basis so that we can respond promptly in the event of revisions to laws and regulations.

4. Procurement, development, and provision of environmentally friendly products and services

The Envipro Group will promote the procurement, development, and provision of environmentally friendly products and services to customers, business partners, and local communities. We will comprehensively consider the global environment by manufacturing products using low-carbon processes such as RE100 plants, manufacturing products that contribute to reducing environmental impact, and developing efficient means of transportation.

5. Increase employees' environmental awareness

Our group will strive to raise the environmental awareness of its employees in order to conduct its business activities in an environmentally friendly manner. We encourage all employees to actively take action toward environmental

conservation by providing education and training on the environment and by making them aware of our environmental initiatives.

6. Disclosure of environmental information

Our group will proactively disclose environmental information and communicate with all stakeholders. We will work to disclose information related to the environment such as publication of environmental information in sustainability reports and on websites.

Our group is committed to fulfilling its social responsibility by proactively implementing initiatives to protect the environment.
